## **FISHING SITUATION**

Fishing in Chile showed an increasing due to better captures in the north area where we can see that industrial fleet is already getting some landings specially in mackerel. However, the total captures for sard/anchovy are still far from acceptable levels in that area.

Meantime, in the center-south area, the captures remain in similar levels than past week and the sardine/anch quotas are near to be done by end of may.

Jack mackerel captures have been decreasing progressively and it is estimated that it should remain stable for the next few weeks.

## PERU

In the case of Peru, excellent catch levels continue to be reported, where daily landings exceed 55,000 tons on average. Although there is still a part of juveniles, the Peruvian authority controls it with the imposition of small closures in specific areas of the coast, as has been the trend during all fishing seasons.

## GENERAL COMMENTS

**Covid Situation** : While the pandemic lasts, we will include a short summary about the situation in Chile with respect to COVID and its current status.

The COVID situation is still improving , but slower than expected. In despite of the wide vaccine campaign, the daily cases cant get lower of 4000/day but are stuck little less than 5000. But anyway, the vaccine is under going and it shall show real effects in coming weeks.

## **BRIEF MARKET COMMENTS.**

The market remain calmed because sellers remain in the bullish position with no hurry in sales, as they must produce the huge volume already fixed in past months....and just then, they will enter in market for selling. And in the meantime, from buyers side, they are arguing with big stocks in China ports, reaching now more than 200,000mt which is very high for this period, specially considering a consumption of roughly 20,000mt per week.

In case of Chile local market , it has been very active , where we have reported bizs of Fmeal 67 120 500 at us1700 ex plant , and the buyers are still on demand. In case of producers, they are blending meals resulted in medium grades ( high histamine) with high grades in order to fulfill the commitments already fixed on months ago. Therefore, there are not special interest to flood the market with big volumes for now. And we also know that among the factors that favor activity in the local market, it is the fact of the tremendous export logistical difficulties that not only fishing companies from Chile are facing, but also the entire export spectrum.
